RESIN

PANELS FOR COUNTERS,
WALL CLADDING
AND MORE

#MATERIALSFORDESIGN

A close-up photograph of a resin surface, showing numerous small, clear bubbles of varying sizes. The word "RESIN" is overlaid in white, bold, sans-serif capital letters in the center of the image.

RESIN

Organic materials, cool metal or mellow textiles, all embedded in transparent resin panels.

This innovative material offers considerable bespoke design possibilities.

We can insert material at multi-layer levels to create a three dimensional effect that intensifies the visual depth, we can even make the backing layer opaque to create fascinating room lighting design solutions.

And we have a multitude of surface texture finishes from high gloss to pearl effect!

If you can't see what you want, let us know and maybe we can figure it out for you...

Call Innerspace Cheshire on 01270 625043 or mail samples@innerspacecheshire.co.uk for speedy samples or further information.

GET SPECIFIC

Composition	PETG with embedded material
Thickness	4, 6, 8, 10, 12, 16, 20 and 24mm. Minimum thickness depends on the embedded material
Dimensions	1,450 x 3,000mm standard. Other sizes available.
Sq. m per Panel	4.35 sq. m standard. Other sizes available.
Weight	1.27 g / cm ³
Suitability	Room dividers, wall panels, door leaves, shower partitions
Fire Rating	EN 13501-I BI or B2 depending upon the embedded material

Options

For many of the embedded materials we offer a choice of one or two layers of material

Six different surface finishes are available

Different surfaces can be selected for the front and back of panels

High Gloss and Classic allow clear visibility, other alternatives are translucent and offer a degree of privacy

Different edge finishes are available. Edge banding protects the embedded material from moisture at the edges

Fade Out Decor is available. Especially suitable for inlays of natural materials it allows the density of the inlay to fade out from one edge of the panel to another

A translucent layer can be added for use with backlighting

UV protection is possible for external use

Prefabrication is possible on request

It is possible to make bespoke panels with your own materials. We will need to test the material to ensure its suitability.

GET FITTING

Innerspace Design Panels are suited to all conventional processing techniques; sawing, drilling etc. Cold bending and thermoforming is possible, depending on the embedded material.

GET CLEANING

The surface of Design Panel can be cleaned using a damp cloth.
